

CONSISTENCY IS KING

In construction, consistency is king.

PREDICTABILITY GETS A BAD WRAP. All too often people see that word and they immediately think boring and uninspired. In our business, however, predictability is desirable and consistency reigns supreme.

If your organization is considering building a new headquarters or expanding your capacity, you're looking at a significant investment...millions of dollars, maybe tens of millions. If you notice even the slightest deviation from your construction partners you should run in the opposite direction as fast your legs can carry you. You want predictability and consistency. That's one key advantage precast concrete construction has to offer—the surprises are few and far-between. Precast concrete panels are generally engineered, manufactured, delivered and installed by the same organization.

Our organization has spent 45 years pursuing predictability and removing the unwanted variables. Our service strategy and manufacturing process have been engineered with consistency in mind, and not just in an anecdotal sense. We continually find ways to measure and quantify consistency.

Fabcon is a certified MNL-116 structural concrete panel manufacturer. In shorthand, that means our panels are straight and true and meet architectural aesthetic standards for color consistency from top to bottom and from one panel

to the next. The same can be said of the PCI Certified installation crews that erect our panels. They do nothing else...day in and day out they install Fabcon precast panels. Some crew members have been doing the job for decades and they're brilliant at it.

The same goes for our leadership team. Fabcon's officers and directors have an average tenure of 15 years, and many have logged 20 to 30 years of service. That consistency has not resulted in complacency; rather, it has resulted in a never-ending predictable desire to innovate, improve and grow. We're predictable, all right—certifiably so.
