WHEN EVERY PENNY COUNTS

Obtaining funding and support for government, non-profit and community-based projects is rarely easy—all the more reason to work with a partner that guarantees the value you receive today will continue for the life of your building.

When your attention is given to the financial requirements of a project, Fabcon's value is even more apparent. Dollar for dollar, a Fabcon Precast building delivers more than any other building system. When compared with masonry block, site-cast or traditional structural steel and panel construction, the advantages of choosing Fabcon start early in the process and continue throughout the life of your community's building.

The performance capabilities of precast wall panels speak for themselves: structural- and architectural-grade; fire-, water-, and wind-resistance; sound attenuation; R-values up to 28.2; and sustainable manufacturing practices that use up to 58% recycled materials. The outstanding performance of Fabcon panels is only one

of three legs of the stool. The others are our highly trained design, manufacturing, and quality engineers as well as our construction installation crews, all of whom are certified by PCI.

Fabcon's experience working with organizations while they design the most energy-efficient, maintenance-free, and fiscally-viable buildings has resulted in many successes. And while we are proud of our products and construction efficiencies, we are most proud to be recognized as a service-oriented partner who is looked upon as a supplier who cares about those who will use the building.

REACH & RESOURCES OF FABCON

THE FABCON ADVANTAGE

- A full engineering department
- A wide selection of finish options
- Outstanding thermal performance
- A controlled manufacturing environment that ensures consistency
- Multiple manufacturing plants provide speed and capacity
- Meets your need for “green” with considerable levels of post-consumer and post-industrial content. Precast make-up may vary by location.

If you have additional questions about Fabcon's products or capabilities, contact your sales engineer.
